

Sunshine Bakery — AI WhatsApp Customer Assistant

Project: Bakery Whatsapp App

Repository name: sunshine-bakery-whatsapp-ai-assistant

Project Overview

This project demonstrates an AI Bakery WhatsApp Customer Assistant built in a ChatGPT Project. The assistant acts as Chef Marie's friendly counter assistant for Sunshine Bakery and uses uploaded menu and inventory sources for grounded pricing and availability responses.

Implemented Features

Feature	Status
Menu-based pricing lookup	Completed
Inventory-based availability check	Completed
Out-of-stock alternative suggestion	Completed
Not-on-menu fallback	Completed
FAQ handling	Configured
Step-by-step order detail capture	Completed
Structured Order Summary Draft	Completed
Human staff review/payment handoff	Completed
Custom cake reference-photo escalation	Completed
Payment / price negotiation guardrails	Configured
Project instruction protection	Completed

ChatGPT Demo: <https://chatgpt.com/share/6aba050e-63bc-83ee-a502-e31a17d7f1a8>

Source Files

The repository includes menu.txt and inventory.json. menu.txt contains the assessment menu items, descriptions, and prices. inventory.json contains the sample daily stock and availability data used for the demonstration.

Testing Completed

Manual testing covered pricing lookup, availability checking, out-of-stock alternative suggestions, not-on-menu fallback, order-detail capture, structured order summary generation, custom-cake escalation, and instruction-protection refusal.

Notes

The menu and inventory files were prepared as assessment sample source data because the assessment document specifies the required file structure but does not provide the actual source-file contents. The assistant is configured to avoid inventing prices, products, or availability and to hand final order confirmation and payment to human staff.
